RoHS-WEEE

DECLARATION OF CONFORMITY

Waste electrical and Electronic equipment

- PRODUCT:** Custom Control Sensors “DUAL-SNAP” OEM manufacturer of adjustable standard and custom pressure, temperature and flow switches.
- SERIES:** Manufacturer of full range of Pressure, Differential, and Temperature Switches in different configurations: 604, 605, 607, 608, 611, 642, 646, 672, 673, 674, 675, 676, 690, 6200, 6400, 6500, 6700, 6800, 6900, 6905 and 6906.
- MANUFACTURER:** Custom Control Sensors, Inc., 21111 Plummer Street Chatsworth, CA 91311 USA
- COMPLIES WITH:** EU Directive 2002/96/EC, on the “Restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS)” and EU WEEE Directive 2012/19/UE, “Recast Waste Electrical and Electronic Equipment” published in issue L197 of the Official Journal of the European Union on July 24, 2012. ROHS Regulations, Government Guidance Notes.

The recast WEEE Directive (2012/19/EU) was published in the Official Journal of the European Union on 24 July 2012 and has already entered into force. Producers of electronic and electrical products must transition to an open scope, process for harmonized registration, reporting, and producer definition, meet the requirements for Authorised Representative for offshore manufacturers with no importer, and meet increased recovery targets.

The European Union’s Waste Electronics and Electrical Equipment (WEEE) Directive places the obligation of recycling (including collection, treatment, and environmentally friendly disposal) of electrical and electronic equipment (EEE) products upon manufacturers. The goal is to reduce electronic waste, protecting human health and the environment from hazardous substances. Failure to comply with the WEEE Directive places these manufacturers at risk for prosecution and inability to place their products in the EU market.

I declare that the above-referenced equipment/series of pressure and temperature switches conforms to Annex 1A of EU Directive 2002/96/EC and EU WEEE Directive 2012/19/UE except Category 9 equipment. CCS is fully committed to meeting the requirements of these directives.

As of July 1, 2006, unless a product falls into an “exempt” category, no product containing more than the substance limits shown below will be allowed into Europe:

- Lead (Pb) 0.1 % by weight per homogeneous material*
- (Pb limit exceptions: 4.0 % for copper alloy/brass, 0.4 % for aluminum, and 0.35 % for steel)
- Mercury (Hg) 0.1 % by weight per homogeneous material
- Hexavalent chromium (Cr (VI)) 0.1 % by weight per homogeneous material
- Polybrominated biphenyls (PBB) 0.1 % by weight per homogeneous material
- Polybrominated diphenyl ethers (PBDE) 0.1 % by weight per homogeneous material
- Cadmium (Cd) 0.01 % by weight per homogeneous material

Note: * “Homogeneous material” is a material that cannot be mechanically disjointed.

These substances could be present in raw materials, components, platings, assemblies, or introduced during various manufacturing process operations (e.g., cleaning or machining).

The new regulations became effective on **1 February 2008** and replaced similar regulations that came into force on 1 July 2006. These requirements are based on the Department for Business Innovation & Skills “BIS” dated June 2009. Government Guidance Notes at: <http://www.berr.gov.uk/files/file52010.pdf>

The RoHS Regulations apply to all EEE containing hazardous substances put on the market in the UK on or after 1 July 2006, which fall into any of the eight broad categories listed in Annex A. Annex A also includes indicative (but not exhaustive) examples of products under each of the categories. The regulations specify a voltage range within which the products in the eight categories must fall in order to come within the scope. This is up to and including 1,000 volts AC or up to and including 1,500 volts DC.

For specific RoHS product requirements please check CCS’ website (www.ccsdualsnap.com) for status updates on CCS RoHS compliance.
